

## Feasibility Study

It is an important phase in software development process. It enables the developer to have a clear idea of the products being developed in terms of outcomes of the product, operational requirements for implementing it.

Various feasibility study are of :- ~~four~~

- (i) Economic Feasibility
- (ii) Operational Feasibility
- (iii) Technical Feasibility.

### (i) Economic Feasibility

The proposed system is examined to be economically feasible as:

→ simply customers can make booking through website without regular phone calls or direct communication.

- user friendly website
- online booking and online payment.
- Ability to see workers performance by managers

## (ii) Operational Feasibility

It is a measure of how well a proposed system solves the problem in a scope definition.

The proposed system is examined to be operationally feasible as :-

- It can work for 24/7 as it is an online website.
- Efficient results in less response time
- Provides customers with accurate information.

## (iii) Technical Feasibility

Frontend :- HTML, CSS, Javascript for responsive website.

Backend :- PHP & MySQL as the backend technology.
